

Energy Policy of Abfallbehälter & Container Weber GmbH & Co. KG

The manufacture of our products involves a high level of energy use, which places a burden on the environment and, due to the finite nature of fossil resources, leads to steadily rising energy costs. With the aim of maintaining the quality of our products, continuing to offer a convincing price-performance ratio and at the same time fulfilling our social responsibility with regard to the environment, we have incorporated energy as an important aspect into our corporate policy. Against this background, we commit ourselves to permanently reducing our energy consumption, avoiding unnecessary energy use and optimizing our energy-related performance in a continuous improvement process. For this purpose, our company uses an energy management system in accordance with DIN EN ISO 50001, maintains it and continuously improves its effectiveness.

Through long-term strategic decisions relating to our energy consumption, we aim to achieve the best for our customers, our employees, our company and society. Accordingly, within the framework of our energy management system, we commit ourselves:

- to complying with and continuously reviewing all legal requirements relating to our energy use, energy consumption and energy efficiency;
- to providing the necessary information and resources for achieving the strategic and operational energy objectives;
- to supporting the purchase of energy-efficient products and services in order to contribute to improving energy-related performance.

The basis of our success is qualified and responsible employees. Through information and training, we aim to promote energy-conscious conduct among our employees. Employees are integrated into our energy management system and have both the right and the duty to work towards the immediate elimination of circumstances that lead to unnecessary energy consumption.

If you have any questions about our energy management system or ideas and suggestions for improvement on how we can save further energy, please contact the Energy Management Officer directly.
